

**CLINTON, WI, October 27, 2023** - Grown Climate Smart featured on Comrades In Farms - A Regenerative Agriculture Podcast Discussing Sustainable Farming and Regenerative Practices

Clinton, WI – Grown Climate Smart, a leading sustainable farming practice program, spent time discussing sustainable and regenerative agriculture on its recent feature on the Comrades In Farms - A Regenerative Agriculture Podcast. This appearance highlighted Grown Climate Smart's commitment to incentivizing farmers for embracing climate-smart practices, including Cover Crops, Reduced Tillage, Nutrient Management Plans, and Windbreak Establishment.

During the podcast, Grown Climate Smart shared insights into their innovative program, which rewards farmers for adopting or continuing practices that reduce their carbon footprint and contribute to a healthier planet. With over 250,000 acres under its sustainable farming practice program that is available in 11 states, Grown Climate Smart is not only helping revolutionize the agriculture industry but also contributing to sustainable, lower-carbon intensity grain production, benefiting customers that include food ingredient manufacturers, ethanol plants, distilleries, overseas markets, and animal feed companies.

Grown Climate Smart's feature on the "Comrades in Agriculture" podcast is yet another effort to educate the market about the growing momentum of sustainable and regenerative agriculture practices in today's world. This recognition underscores the program's pivotal role in fostering environmental responsibility and setting the bar high for sustainable farming programs.
