

# Grown Climate Smart Nutrient Mgmt. Enrollment

Along with a completed enrollment form including all acres you wish to incentivize, payment for the Nutrient Management practice requires the following materials listed on this sheet.

---

1. **NRCS-approved nutrient management determined from up-to-date soil tests**– To be eligible for our program, producers must meet NRCS standards defined by their state for approved rate, source, placement, and timing of plant nutrients and soil amendments. Technical guides for your specific state can be found on our website at <https://www.grownclimatesmart.com/forms-and-standards> under your state’s dropdown menu.
2. **NM Summary Form** – Please provide a general summary of your operation’s nutrient management by completing the included form.
3. **Submission of a Nutrient Management Plan written by a Certified Crop Advisor (CCA) meeting NRCS 590 standards** – NMPs must be submitted in a format we can access. This can include .snapDB files, .mmp files, pdf or word printouts, physical copies, etc.
  - a. State NRCS offices have created documents used when producers submit NM information for funding called ‘Information Requirement (IR) Documents.’ It may be convenient for an enrollment to use these documents to assist with 590-compliant NMP creation. These may exist as an excel worksheet with instructions, a .pdf directing you to freely-available software, a fillable form with a checklist for required reports, etc., determined by the individual state offices. These are accessible at the NRCS Field Office Technical Guide website (<https://efotg.sc.egov.usda.gov/#/>) under your specific state and 590-Nutrient Management, or on our website at <https://www.grownclimatesmart.com/forms-and-standards> under your state’s dropdown menu.
  - b. A submitted nutrient management plan requires (but is not limited to): up-to-date soil test dates, soil P and K values, at least 4 years of future planned crop rotation, fertilizer rates (or indication of the use of variable rate) within permitted amounts.

*The DeLong Co., Inc.’s Agronomy Division is available for technical assistance in the creation of your plan or can be contracted to collect necessary soil samples and create a compliant NMP for your operation. Please reach out to a member of the Grown Climate Smart team to be put in contact with an agronomist.*

---

Nutrient Management proofs have a submission deadline of **October 4, 2024**, the first Friday in October.

**Contact the Grown Climate Smart team with any questions:**
