

Grown Climate Smart Tillage Reduction Enrollment

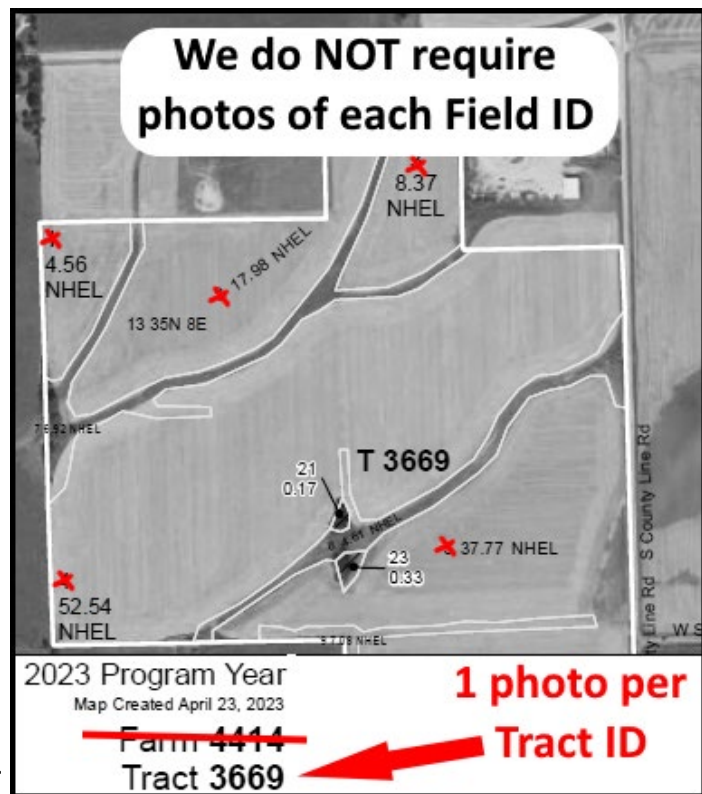

Along with a completed enrollment form including all acres you wish to incentivize, payment for the Tillage Reduction practice requires the following materials listed on this sheet.

1. **NRCS-approved Soil Tillage Intensity Rating (STIR)**– To be eligible for our program, producers must meet NRCS standards for permitted rates of soil disturbance to be classified as Reduced Till or No-Till. Our TR Operation Form lists common practices that meet the requisite thresholds. If your operation is not included on our list, a RUSLE-2 printout of your operation showing a STIR rating below the maximum of 80 will be sufficient for acres to be considered Reduced Till (20 for No-Till).

2. **TR Operation Form** – Please provide tillage information related to the 2024 crop year on your enrolled tracts. Additional copies are available at: <https://www.grownclimatesmart.com/forms-and-standards>

3. **Tillage photos for each enrolled Tract ID**

For each individual Tract ID being enrolled for Reduced Till / No-Till incentives, please provide a photograph of an included field taken **within 2 months of planting, or within 1 month of enrollment (whichever is later)**. Some Farm IDs have multiple Tract IDs. Photos can be uploaded to our Dropbox at www.grownclimatesmart.com/proofs, texted to David Swanson at (608)352-1726, emailed to David.swanson@grownclimatesmart.com, mailed to PO Box 552, Clinton, WI 53525, or brought to your nearest DeLong location.

Tillage Reduction proofs of practice have a submission deadline of **October 4, 2024**, the first Friday in October.
